Cracking and Collapsing in Henry's Mountains

LIONHEAD AREA Lionhead Range 1/27/2019 Code Latitude 44.66410 Longitude -111.35600

Cracking and collapsing on a 31-degree slope near the Lionshead area down south. The <u>slab</u> was 3-4' deep, and the slope was on the verge of being steep enough to avalanche. From the email: "fractured about 20'x10' area initially, maybe 3-4' deep. We got off the hill and it continued to <u>fracture</u> in bigger spots but did not <u>slide</u> more than a foot total."
