

We were able to trigger a couple small slabs of wind-drifted snow at the ridgeline of Divide Peak on 2/18/22. This is a sign recent drifts are unstable for a day or two. Some recently formed wind slabs could be large enough to bury or injure a person. Photo: GNFAC

Advisory Region Northern Gallatin Longitude -110.98W Latitude 45.40N

Avalanche Details: Skier intentionally triggered small wind slabs, Divide Pk
