## Collapse in Hayden Creek

Hayden Creek Cooke City 3/6/2023 Code Latitude 44.99550 Longitude

Notes

-109.90000

Our party experienced a sudden <u>collapse</u> while ascending, as we exited the trees above Olie's Woods and began to cross a a meadow @9600'. The <u>collapse</u> was assumed to be at least 100' wide, as we saw a small tree shake approx 100' from the leader and our entire party felt the <u>collapse</u>. We dug a pit and got the following results:

HS 135

ECTP 17; 55cm down.

SP- Q1, Sudden Planar failure, entire block slid into pit

Failed on 2mm facets, 10 cm below an ice crust.

Number of slides
